ementerian Kesihatan Malaysia (KKM) tan Malaysia (KKM) menegaskan tiada pe-lepasan nyamuk aedes ber-Wolbachia di Negeri Sem-bilan buat masa ini seperti yang ditularkan menerusi video di TikTok.

Timbalan Ketua Pengarah Kesihatan (Kesihatan Resihatan (Kesihatan Awam) Datuk Dr Norhayati Rusli sebaliknya berkata vi-deo yang tular itu adalah berkaitan dengan Program Eradikasi Malaria dan tiada kaitan dengan Program Kawalan Denggi mengguna-kan nyamuk aedes berWol-

bachia.

"Merujuk kepada video tular yang dikongsikan di me-dia sosial TikTok mengenai na sosiai riktok mengenai pelepasan nyamuk Aedes berWolbachia di Negeri Sembilan, KKM berterima kasih kepada pemilik akaun tersebut kerana prihatin de-ngan situasi semasa denggi

di Malaysia.

"Pihak KKM juga ingin menarik perhatian masya-rakat kepada peranan komuniti dalam pencegahan denggi iaitu penjagaan kebersihan persekitaran di ka-wasan kediaman dan kejiranan, penghapusan tem-pat pembiakan nyamuk Aedes dan penggunaan semburan aerosol dalam premis serta peng-gunaan alat pelin-dung diri (PPE) di luar premis seperti bahan penghalau nyamuk," katanya dalam satu kenya-taan di sini.

Kenyataan dikeluarkan bagi membetulkan beberapa kenyataan tidak tepat dalam video berkenaan.

#### KKM NAFI DAKWAAN VIDEO TULAR

# Tiada pelepasan nyamuk aedes berWolbachia

Selain itu, beliau turut membetulkan fakta menge-nai nyamuk aedes yang di-dakwa hanya menghisap da-rah untuk hidup.

Menurutnya nyamuk aedes betina memerlukan darah untuk perkembangan telur namun kedua-dua nyamuk aedes jantan dan betina memerlukan cecair manisan (nektar) pada tumbuhan un-

tuk kelangsungan hidup. Dr Norhayati juga menje-

# Desperate for some shut-eye

## Insomniacs are taking flu or cough meds to help them get some sleep

By JUNAID IBRAHIM and RAGANANTHINI VETHASALAM newsdesk@thestar.com.mv

PETALING JAYA: Working adults who struggle to fall asleep at night are turning to prescription medi-cines such as cough syrup to help them doze off when other measures don't work.

Data analyst Ahmad (not his real name), who has been suffering from sleep problems for years though not officially diagnosed as insomniac, said he resorted to cough syrup to get his much-needed slumber.

The 30-year-old said he had tried all other remedies such as using warm lighting in the bedroom and reading books before

bed, to no avail.

He then turned to cough syrups that were accessible at local pharmacies without stringent con-

"Cough syrups really help me

"Cough syrups really help me get sleepy.
"I'm aware of the possible consequences but I have no other choice," said Ahmad, who lives in Subang Jaya, Selangor.
At local pharmacies, he would usually be asked the reason why he needed the medicine.

he needed the medicine.

"I'd merely say I have a sore throat. Other than that, I just need to provide my contact information and identification number

and it's all good," he added.

Ahmad is not alone. Joint research by Universiti Malaya and Universiti Kebangsaan Malaysia in 2021 found that 54.7% of working adults in Malaysia had insufficient sleep of less than seven hours daily.

seven hours daily.

It also said the rate of sleep insufficiency in the sample was much higher in comparison with the United States and Australia, where the rates were 34.8% and 24% respectively.

The local research surveyed a total of 11,356 working adults of

various ages.

A writer who declined to be named said he relied on cough mixture to get some shut-eye.

The 29-year-old said he had unsuccessfully tried other methods such as installing black-out curtains and cutting the use of the court in the said of the s electronic devices an hour before bedtime.

"It's been happening for a while now. Even after I exercise or have

a hard day at work, I can't sleep. When I eventually do fall asleep, it could be close to four in the morning and I'll wake up feeling even more tired.

"With the cough mixture, however, I just doze off easily and get some proper rest

some proper rest.
"I know it's not healthy but for the sake of my sanity, I feel it's a

risk worth taking for now."

Aside from cough syrup, flu
drugs are another popular option
for people with sleep disorders.

A senior executive who pre-ferred not to be identified said she consumed at least one flu pill at night to overcome her insom-

"My job can be stressful and sometimes in bed, I'd still be thinking about work. It makes me

"The only way for me to get a good night's sleep is by taking flu medication," she said.

Doctors confirmed that there had been requests for prescription medicines to help people

sleep.
"The demand is lower compared with previous times because of strict enforcement from the authorities

from the authorities.
"Nowadays, to sell psychotropic drugs, you need special annual permits and documentation on who you dispense the drugs to. The information has to be recorded in a logbook," said a general practitioner on condition of anonymity.

Another doctor said cough

syrups, antihistamines, hypnotics, steroids, benzodiazepines and melatonin were the drugs often

"Prescription drug abuse is quite a common problem. The patients don't usually go to clinics. Many buy them straight over the counter from pharmacies," he said.

## **Experts: Cough** syrup not the cure for insomnia

PETALING JAYA: Consuming cough syrup to address sleeping problems will only lead to other health issues, says senior family medicine consultant Assoc Prof

medicine consultant Assoc Prof Dr Aznida Firzah Abdul Aziz. She said a dependency on the medication would cause other difficulties that would not help in addressing the root cause of incomina

addressing the root cause of insomnia.

There are various factors that could contribute to sleeplessness including mental health disorders, she said.

"Some patients who suffer from mental health conditions such as anxiety would be kept up at night."

at night.

"The same goes to people with depression. Even though sometimes the disorder could 'cause excessive sleeping, it could also impair their ability to sleep," she said when contacted. said when contacted.
Dr Aznida explained that sleep

deprivation would lead to worse medical conditions in both short and long terms.

and long terms.

Among the health conditions include hypertension, impact on blood sugar and cholesterol levels, risk of heart failure, and

The senior lecturer at Universiti Kebangsaan Malaysia said it is important for someone facing difficulties to sleep to practise better sleep hygiene.

This includes having a fixed Inis includes having a fixed bedtime, stopping coffee or alcohol intake before sleep, avoiding the use of electronic devices and increasing physical activities.

A doctor at a government hospital said the dependence on prescription medication does not

prescription medication does not come about because users want to get "high" but instead, it is consumed to address their health

problems.

"The dependence does not begin with the person wanting to abuse substances. People don't usually go for it to get 'high'," he

Malaysian Pharmacists Society president Amrahi Buang said the organisation is against the usage of drowsiness-inducing drugs to

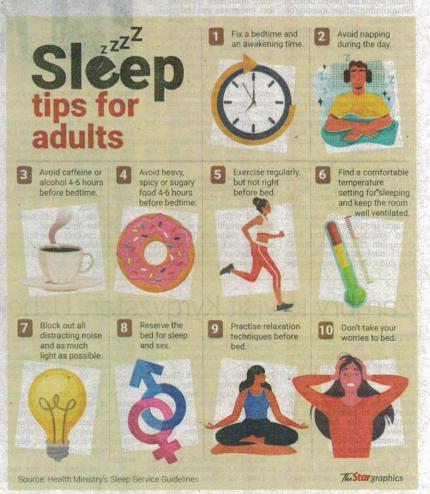

of drowsiness-inducing drugs to treat sleep difficulties. He said patients need to seek professional help and advice instead of self-medicating by con-suming substances such as cough syrup and antihistamine. "If you have an insomnia issue,

"If you have an insomnia issue, you should find out the root problem by consulting doctors.

lem by consulting doctors.

"At pharmacies, we record every drug that is prescribed and we would advise the patients whether they really need the medication," he said.

Amrahi said the bad practices of "self-prescribing" could be overcome if the public have higher health literacy.

### Wear face mask to avoid infection

THE wearing of face masks, previously mandatory during the height of the Covid-19 pandemic, has now become a personal choice.

Following guidance from the Health Ministry, the government has relaxed the rules regarding face mask usage in public transport and hospitals.

Wearing a face mask has been highly beneficial for many individuals as it has played a significant role in reducing the transmission of infectious diseases carried through respiratory droplets.

When worn correctly, clinically approved masks have proven to be effective in significantly reducing the spread of diseases.

In addition to mitigating the transmission of Covid-19, hand,

of diseases.

In addition to mitigating the transmission of Covid-19, hand, foot and mouth disease and Monkeypox, the use of masks has also proven effective in reducing the spread of other viral infections, including common colds and coughs.

430111 17 7511

The regular use of face masks has resulted in a decrease in the occurrence of common colds among both children and adults

occurrence of common colds among both children and adults who were previously prone to catching them.

Therefore, it is beneficial to wear a mask when in public because the air contains various viral respiratory droplets that are contaminated and can lead to the onset of illnesses.

It has been mandatory for food and beverage (F&B) operators in Selangor to wear a face mask at all times from Jan 1. It is hoped that F&B operators nationwide will also comply with this regulation to ensure optimal hygiene and cleanliness.

Wearing a mask significantly reduces our risk of infection compared with not wearing one. Our well-being is at stake, and taking preventive measures is always preferable to dealing with the consequences later.

## Strategies to control and prevent dengue cases

BY LAYLA AQEELA KHAIRUL ANUAR, KISHVAN NAIR, RESHGI VAISHALI LACTMANAN@RAJAN, NURFAZIELA MUHAMMAD ZULLY AND JEMIMA HII BENG ENG

ACCORDING to data from the Health Ministry, the number of dengue cases has risen by 150%, with the death toll increasing by 180% since 2021. These figures indicate the severity of the

This outbreak has a profound impact on the population, posing a serious threat to public health and imposing significant burdens on the healthcare system, further straining available resources.

Severe cases of dengue can result in hospitalisation and, in some instances, fatalities. The surge in dengue cases, especially during peak transmission seasons, can overwhelm healthcare facilities and

compromise patient care.

Concerted efforts are being made by healthcare personnel and the public to combat this ongoing and rising threat by implementing rigorous mosquito control measures-and adopting effective strategies for

disease management.

- Dengue treatment can pose a significant financial burden on individuals, families and healthcare

systems. The cost of hospitalisation, diagnostic tests, medications and follow-up care can be substantial, especially for the lower-income

group.
Increased expenditures spent on Increased expenditures spent on managing dengue outbreaks will no doubt strain healthcare budgets, diverting resources from other essential health services.

To eradicate dengue, a multifaceted approach is needed. A variety of initiatives can be undertaken by healthcare personnel.

Before any initiatives can be implemented, the healthcare system must be strengthened.

Improving dengue diagnosis and reporting systems for early detection and timely response are measures

Healthcare professionals can identify cases more quickly and initiate appropriate management strategies by improving the efficiency

of diagnostic processes.
Furthermore, it is crucial to provide training and resources to healthcare professionals.

The management of dengue is continuously changing with the rapid development of technology to ensure better patient outcomes. Thus, continuous medical education and workshops are vital in keeping healthcare professionals up to date with the latest advancements in dengue management.

with the latest advancements in dengue management.

A comprehensive mosquito surveillance system is essential for identifying high-risk areas and monitoring mosquito populations. Regular larval and adult mosquito surveys should be conducted to

assess the abundance and distribution of dengue vectors.

Targeted control measures can be implemented by collecting data on mosquito breeding sites and population dynamics. Integrated Vector Management (IVM) is a holistic approach to mosquito control that combines various strategies.

Source reduction, which involves eliminating or modifying mosquito breeding sites, is a crucial component of IVM. This can be achieved by promoting proper water storage practices, ensuring proper drainage and regularly cleaning and emptying

In addition, larvicide (treating

water bodies with larvicidal agents) and adulticide (controlling adult mosquitoes) should be conducted. Targeted adult mosquito control measures, including space spraying, should be implemented in high-risk areas to reduce the adult mosquito propulation. population.

The public can also play a crucial

role in ensuring that dengue transmission is curbed. Public awareness campaigns to educate individuals about dengue about symptoms transmission, symptoms and preventive measures should be

Participating in these campaigns will make the public aware of the dangers of dengue and be responsible, leading them to be more

proactive in protecting themselves.

Personal protective measures are vital in reducing mosquito bites, such as using mosquito repellents, wearing protective clothing and using bed nettings. It is also essential to bed nettings. It is also essential to minimise mosquito exposure by avoiding outdoor activities during peak mosquito activity times, typically early in the morning and late

Individuals can significantly reduce mosquito breeding sites in their homes and communities by taking simple steps. These include emptying and cleaning water containers regularly, covering water storage containers to prevent mosquitoes from accessing them, and ensuring proper drainage to avoid stagnant water accumulation.

Combating dengue is everyone's responsibility. By engaging in community clean-up campaigns and efforts to eliminate mosquito

efforts to eliminate mosquito breeding sites, individuals can contribute to creating a dengue-free

contribute to creating a dengue-free environment.

Community-based surveillance can also be established, with community members reporting and monitoring potential breeding sites. Addressing and handling this disease should start at the community level by collaborating with local authorities and and community leaders and healthcare providers.

In conclusion, preventing dengue in Malaysia requires a multifaceted approach involving healthcare personnel and the public. By working together, we can effectively control dengue.
